

Amendments to the Claims

1. (Currently Amended) An apparatus comprising:
an interface to receive video; and
a controller to:
display at least one object and the video; and
adjusting a position of the at least one object in response to displaying the video, wherein to adjust the position of the at least one object comprises to arrange the at least one object in a manner so that both the video and the at least one object are prevented from having an impeded view.
2. (Original) The apparatus of claim 1, wherein the controller adjusts the position of at least one of an image or text in response to displaying the video.
3. (Original) The apparatus of claim 1, wherein the controller adjusts the position of the object in response to adjusting at least one of location and size of the video.
4. (Original) The apparatus of claim 1, wherein the controller allows the video to be displayed while the contents of the object are updated.
5. (Currently Amended) The apparatus of claim 1, wherein the controller displays the video in a window of at least one of a word processor, an application to browse the Internet, and an electronic mail processing application.
6. (Original) The apparatus of claim 1, wherein the interface receives the video over a wireless link.
7. (Original) The apparatus of claim 1, wherein the interface comprises at least one of a television tuner card and a disk drive.
8. (Original) The apparatus of claim 1, wherein the interface receives the video over a network.
9. (Original) The apparatus of claim 1, wherein the interface receives the video over a universal serial bus.
10. (Currently Amended) A method, comprising:
displaying an object on a display; and
adjusting the object on the display in response to displaying video on the display, wherein adjusting the object comprises arranging the object in a manner so that both the video and the object are prevented from having an impeded view.
11. (Original) The method of claim 10, wherein displaying the object comprises displaying at least one of text and image on the display.

12. (Cancelled)

13. (Original) The method of claim 10, further comprising adjusting the object in response to moving the video on the display.

14. (Original) The method of claim 10, further comprising adjusting the object in response to altering the size of the video on the display.

15. (Original) The method of claim 10, wherein adjusting the object comprises adjusting the object in response to displaying video received from a disk drive.

16. (Currently Amended) The method of claim 10, wherein adjusting the object comprises adjusting the object in response to displaying video received over at least one of a network, a universal serial bus, and a wireless link.

17. (Currently Amended) An article comprising one or more machine-readable storage media containing instructions that when executed enable a processor to:
display video in a window; and
display text in the window, wherein the text is displayed in a manner that allows both the text and the video to be ~~viewable~~ viewed without obstruction in the window.

18. (Original) The article of claim 17, wherein the instructions when executed enable the processor to display the video in the window of an Internet browsing application.

19. (Currently Amended) The article of claim 17, wherein the instructions when executed enable the processor to display the video in the window of at least one of a word processor and an electronic mail application.

20. (Original) The article of claim 17, wherein the instructions when executed enable the processor to adjust the text in the window in response to changing the position of the video in the window.

21. (Original) The article of claim 20, wherein the instructions when executed enable the processor to adjust the text in the window in response to altering the size of the video in the window.

22. (Original) The article of claim 17, wherein the instructions when executed enable the processor to display the video received from at least one of a wireless link, a network, a disk drive, and a universal serial bus.

23. (Currently Amended) A method comprising:
displaying ~~text~~ an object in a window of a software application executing on a processor-based device;

displaying video in the window of the software application; and
arranging the object text, in response to displaying the video in the window, in a manner that prevents both the object text and the video from having an impeded view ~~are viewable~~.

24. (Currently Amended) The method of claim 23, further comprising displaying one or more images in the window, wherein the object text, the one or more images, and the video are ~~viewable~~ substantially simultaneously viewable.

25. (Currently Amended) The method of claim 23, further comprising re-sizing the video in the window and arranging the object text in response to re-sizing the video in the window in a manner that prevents both the object text and the re-sized video from having an impeded ~~are in~~ view.

26. (Currently Amended) An apparatus, comprising:
an interface to receive a video signal;
a controller to:
 display a web browser application having at least ~~text~~ one object;
 display the video signal in a video portion of the web browser application;
and
 adjust the at least ~~text~~ one object in response to displaying the video portion to allow both the ~~text~~ at least one object and the video signal to be viewed substantially simultaneously.

27. (Currently Amended) The ~~system~~ apparatus of claim 26, wherein the controller to:
allows re-sizing the video portion in the web browser application; and
adjusts the ~~text~~ at least one object in response to re-sizing the video portion.

28. (Currently Amended) The ~~system~~ apparatus of claim 26, wherein the controller to:
allows moving of the video portion within the web browser application; and
adjusts the ~~text~~ at least one object in response to moving the video portion within the web browser application.

29. (Currently Amended) An article comprising one or more machine-readable storage media containing instructions that when executed enable a processor to:
display a first object in a window;
display a second object in the window; and
enable scrolling of the first object in the window, wherein the first object scrolls around the second object in response to scrolling to prevent an obstructed view for both the first and second objects.

30. (Original) The article of claim 29, wherein the instructions when executed enable the processor to display the first object comprising at least text and to display the second object comprising video.

31. (New) The method of claim 23, wherein the object comprises text, an image/graphic, a video, or a combination thereof.

32. (New) The apparatus of claim 26, wherein the at least one object comprises at least one of text, an image/graphic, a video, or a combination thereof.
